PROFESSIONAL SUMMARY

Results-driven Software Developer with 1.5+ years of experience in backend systems and cross-platform mobile apps. Skilled in .NET Core, C#, Flutter/Dart, SQL Server, and RESTful APIs. Proven ability to optimize SQL performance (30%), streamline onboarding (40%), and implement secure RBAC APIs. Passionate about clean architecture, SOLID principles, and delivering production-grade solutions.

TECHNICAL SKILLS

- Languages: C#, Dart, JavaScript, HTML, CSS
- Frameworks: .NET Core 7/8, ASP.NET MVC, Flutter, EF Core, Bootstrap
- APIs & Auth: RESTful APIs, JWT, Swagger, AJAX
- Database: SQL Server, Stored Procedures, Query Optimization, SSMS, LINQ
- Testing: xUnit, API Testing, Postman
- Mobile Dev: Flutter (Android/iOS), Dart, Provider, JSON parsing
- Tools: Visual Studio, Git, Android Studio
- Concepts: SOLID, DI, Repository Pattern, Clean Architecture, Agile/Scrum

PROFESSIONAL EXPERIENCE

Associate .NET Developer — Dynage Tech Pvt. Ltd.

Oct 2024 – Present | Nagpur, MH

Project 1: DBTM – Digital Body Training Management

Tech: *.NET Core 7, Entity Framework Core, SQL Server, RESTful APIs, Flutter, Dart*

- Architected a full-stack Trainer–Trainee management platform deployed across 3+ training centers, handling task assignment, progress tracking, and multi-center data isolation
- Built a cross-platform Flutter mobile app (Android & iOS) integrated with .NET Core backend APIs, enabling trainers to assign tasks and trainees to track progress in real time
- Reduced trainee onboarding time by ~40% by automating the registration and profile-setup pipeline via REST APIs, eliminating 5+ manual steps
- Implemented push notification–based reminder system, improving trainee task completion rates by an estimated 25%
- Applied Dependency Injection and Repository Pattern for a loosely coupled, testable codebase, reducing bug surface area in core modules
- Collaborated with stakeholders to translate business rules into validated API logic, ensuring 100% requirements coverage per sprint

Project 2: Cooperative Banking System

Tech: *.NET Core, Entity Framework Core, SQL Server, RESTful APIs*

- Built a recursive tree-structured Account Management module supporting 500+ account nodes across asset and liability categories with zero performance degradation
- Implemented CTE-based recursive SQL logic to handle unlimited parent–child account depth, replacing a brittle iterative approach
- Optimized SQL queries and EF Core mappings using indexing and execution plan analysis, improving report generation speed by ~30%
- Designed Stored Procedures for bulk account operations ensuring transactional integrity and rollback safety under concurrent writes
- Integrated backend APIs with a front-end tree-view component, enabling auditors to drill down the full account hierarchy visually
- Reduced reconciliation errors significantly by enforcing strict account hierarchy validation at the API layer before DB writes

Project 3: Gym Management System

Tech: *.NET Core, Entity Framework Core, SQL Server, RESTful APIs*

- Developed 8+ REST API endpoints covering member registration, subscription lifecycle, and health metrics tracking for gym operations
- Implemented Role-Based Access Control (RBAC) using JWT to differentiate permissions across Admin, Trainer, and Member roles
- Reduced data entry errors by ~20% through comprehensive server-side input validation and business rule enforcement at the API layer
- Wrote unit tests using xUnit, covering core business logic modules and improving system reliability across regression cycles
- Collaborated in a 3-member Agile team, delivering API integrations on schedule across 2-week sprint cycles

EDUCATION

B.Tech in Information Technology 2024
Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur **CGPA: 7.7**
